Immunopaedia Ambassadors – Asia

Our Ambassadors from across the Asian continent.

What is your name?

Maryam Sadat Seyedmehdi

What is your current position?

M.Sc. Student of Genetics

Which institute and country do you work in?

Shahid Beheshti University, Department of Cell and Molecular Biology, Faculty of Life Sciences and Technology, Iran

What is your home country?

Iran

What are your research interests?

Cancer Genetics, Inborn Errors of Immunity, Bioinformatics

Tell us about yourself and your research interests:

As a master's student in Genetics with a background in Medical Laboratory Sciences, I have developed a deep passion for immunology and multidisciplinary research. My academic journey has instilled in me a strong desire to contribute to the field of immunology and advance our understanding of the relationship between genetics and the immune system's role in health and disease. In addition to my academic pursuits, I am an active member of the gender equality in science community in Iran. Through our collective efforts, we have endeavoured

to raise awareness about gender disparities in science and advocate for greater inclusivity and diversity within the scientific community. Leveraging social media platforms such as Instagram and Castbox, we have successfully engaged a broad and educated audience, shedding light on the challenges and triumphs of scientific research in Iran.

What is your name?

Marjan Sadat Seyedmehdi

What is your current position?

M.Sc. Student of Medical Immunology

Which institute and country do you work in?

Department of Immunology, Shahid Beheshti University of Medical Sciences, Tehran, Iran

What is your home country?

Iran

What are your research interests?

Immunodeficiency, Inborn Errors of Immunity, Immunotherapy

Tell us about yourself and your research interests:

Have you ever wondered how our bodies fight off invisible

invaders? That's what keeps me up at night! I'm Marjan Sadat Seyedmehdi, a master's student in medical immunology with growing fascination for the field. My interest in immunology began with a personal experience with seasonal allergies, sparking my curiosity as a child to learn about the body's immune response. Ever since the COVID-19 pandemic, I even became more fascinated by how our bodies fight illnesses. So when it came to choosing a master's specialization, immunology felt like a perfect fit! I have recently started my thesis in the amazing field of "Primary Immunodeficiency" in Shahid Beheshti University of Medical Sciences, Tehran, Iran. I'm on a mission to become a champion for kids with rare immune disorders, standing alongside them for a better future, hopefully. Since joining the immunology program, I've had the privilege of learning from amazing professors. Their passion for science is contagious, so I always find myself eager to share what I learn with my family, translating those complex terms into easy-to-understand bits. After all, knowledge is a superpower meant for everyone! I'm excited to share my passion for immunology as an Immunopedia Ambassador.

What is your name?

ATM Badruzzaman

What is your current position?

PhD Student

Which institute and country do you work in?

National Institute of Infectious Diseases and Vaccinology,
National Health Research Institutes, Taiwan

What is your home country?

Bangladesh

What are your research interests?

Infectious Diseases, Vaccinology, Immunology

Tell us about yourself and your research interests:

I am a Bangladeshi national currently enrolled in the Doctor of Philosophy (Ph.D.) program in Molecular Medicine. I am fortunate to be part of a joint initiative between the Department of Life Sciences at the National Central University (NCU) and the National Health Research Institutes (NHRI) in Taiwan. My research focuses on the development of a seasonal influenza vaccine using Virus-Like Particles (VLPs) produced through the baculovirus expression system. This innovative approach holds great promise for enhancing the effectiveness of influenza vaccines. Looking ahead, my aspiration is to play a significant role in advancing vaccine development and exploring novel approaches in the field. Additionally, I am keenly interested in advocating for government actions and policies aimed at addressing medical and health challenges.

Krishnapriya Vinod

What is your current position?

PhD Student

Which institute and country do you work in?

Department of Biology, Ashoka University, Haryana, India

What is your home country?

India

What are your research interests?

Human Immunology, Vaccine development, Viral diseases

Tell us about yourself and your research interests:

I am Krishnapriya Vinod, a native of Kerala, India. I hold a master's degree in Zoology and am currently pursuing my PhD at Ashoka University, Delhi NCR, India. Under the guidance of Dr. Rama Akondy, I am a member of the Human Immunology lab, where our research centers on vaccine-induced immune memory and human T cell differentiation. My primary focus lies in understanding naïve cytotoxic T cells and understanding the factors that maintain their 'quiescent' state. This passion was ignited by my interest in studying immune responses, particularly in the aftermath of various emergent viral outbreaks in Kerala.

What is your name?

Somenath Dutta

What is your current position?

Doctoral Fellow

Which institute and country do you work in?

Chemical & Biomolecular Engineering, Pusan National University, South Korea

What is your home country?

India

What are your research interests?

Precision Medicine, Genomics, Vaccine Design

Tell us about yourself and your research interests:

I am Somenath Dutta, a doctoral fellow at Pusan National University specializing in computational biology and high-performance computing. With a Master's degree in Bioinformatics and a Bachelor's degree in Biotechnology, my research focuses on drug design, next-generation sequencing, and the application of machine learning techniques to tackle complex biological challenges. Throughout my academic journey, I have gained valuable experience from different research institutes and I have actively participated and presented in over 50 national and international conferences, contributing to the field of computational biology. I have developed expertise in computational drug design for Protein and RNA-based systems, as well as in Vaccine Design and Omics Study. Currently, I am deeply interested in cancer biology and remain committed to continuous professional development and staying abreast of the latest trends and best practices in research.

My current focus lies in integrating machine learning with computational medicinal chemistry, transcriptomics, and genomics tools. By leveraging these cutting-edge technologies, I aspire to revolutionize basic and translational research, ultimately leading to advancements in Precision Medicine. I want my research papers to be like a meeting point – problems can be solved with opportunities for future generations. I want my work to connect people, in different streams of interest, I aspire to: harmonized and moderate Science with morality.

Ph.D. student

Which institute and country do you work in?

Regional Centre for Biotechnology, Faridabad, India

What is your home country?

India

What are your research interests?

T-cell immunology, Innate immune system, cancer biology

Tell us about yourself and your research interests:

I am an inspiring immunologist, and my dream is to setup my own lab and do research for the betterment of human society. I became fascinated about immunology during my bachelors. My journey in the field of immunology begins when I became a DBT-Ramachandran fellow in 2019-2021 to pursue my masters. I completed my masters from the prestigious institute Regional Centre for Biotechnology, Faridabad. My early research was focused to study the effect of Dengue virus (DENV-2) on Neutrophils and investigated how this DENV-2 induced neutrophils might affect T-cell response. There, we discovered that DENV-2 can alter the morphology, phenotypic, and functioning of neutrophils. These DENV-2 induced neutrophils can cause a sub-optimal T-cell response which can cause severe dengue infection. My research has greatly benefited me in understanding both innate and adaptive immune systems. My future research objectives are to investigate the T-cell response against various diseases and what are the factors which can cause a skewed T-cell response. I also enjoy reading comic books and novels and playing chess. I love science fiction, and Star Wars and Star Trek are two of my favorite series.

Master Graduate Student and Researcher

Which institute and country do you work in?

Faculty of Postgraduate, Department of Immunology, Universitas Airlangga, Indonesia

What is your home country?

Pakistan

What are your research interests?

Microbiology, Immunology, Public Health

Tell us about yourself and your research interests:

I am a Master Graduate student in Immunology and have my undergraduate in Microbiology. My master research project was about the “comparison of d-dimer levels using a coagulometer with an immuno-nephelometer in covid-19 patients”. My research had two objectives which were divided into main and specific objectives. The main objective of my research was to determine the levels of D-Dimer in Covid-19 patients using CS2500 and Architect i1000 analyzers, while the specific objective of my research was to compare the two machines which i-e CS2500 and Architect i1000 in measuring the D-Dimer Levels in Covid-19 Patients. For this research, I had collected my data from RSUD. Dr. SOETOMO hospital, East Jawa Province, Indonesia. By pursuing my Master’s degree in Immunology, I was most intrigued by the work done by other Professors, Researchers, and Graduate Students in the Department of Immunology, Post Graduate School which really motivates me for implementing my

ideas about the novel researches. My research experience during the bachelor's program made me strongly interested in Microbiology and Immunology. Department of Immunology, Post Graduate School, Universitas Airlangga (UNAIR) gave me an opportunity of pursuing further knowledge in this field to help people with inflammatory diseases.

What is your current position?

Research & Creative Associate, Part-time PhD student

Which institute and country do you work in?

Logical Life Science Pvt Ltd, India, Amity University Mumbai, India

What is your home country?

India

What are your research interests?

T cells, Tumor-infiltrating lymphocytes, Cytokines and chemokines in tumor microenvironment, Mesenchymal stem cells

Tell us about yourself and your research interests:

I am an experienced and detail-oriented scientist in the field of immunology and stem cell research. I hold a Bachelor's and Master's degree in Biotechnology, and currently, I am a part-time PhD student. Since completing my undergraduate dissertation, I have honed my skills in multi-color flow cytometry and data analysis. My expertise extends to working with Dental Pulp Stem cells, where I have successfully performed in vitro differentiation of stem cells into the osteoblastic lineage. Currently, I'm working on T cell subsets, optimizing protocols for T cell activation and proliferation in vitro using artificial antigen presentation. I have also worked on monocyte-dendritic cell differentiation in vitro, following CD14 sorting. Beyond my scientific expertise, I have also made significant contributions to scientific publications by creating complex scientific illustrations and graphics for research. My attention to detail and creative flair is evident in my work, which has been well-received by peers in the field. Currently, I am working on Tregs, MSCs, and assay development in immunogenicity of biologics and biosimilars. I'm a proactive researcher who strives to bring new insights into the field and enjoys collaborating with other scientists. My passion for science and my drive to make meaningful contributions in the field make me a valuable asset to any research team.

Assistant Prof, Department of Zoology

Which institute and country do you work in?

Nehru Gram Bharati (Deemed to be) University, Prayagraj, U.P,
India-225105

What is your home country?

India

What are your research interests?

Immunology, Signaling and molecular biology of infectious diseases including Pandemics like COVID-19

Tell us about yourself and your research interests:

Currently I am working as an Assistant Professor in Nehru Gram Bharati University, Allahabad, India and working on the problems arose through COVID-19 along with Kala Azar. I have also recently completed Department of Science and Technology sponsored project on " Role of IFN-gamma in T cell proliferation during visceral leishmaniasis" at Centre of Biotechnology, University of Allahabad, Allahabad, India. I worked as a Fulbright Postdoctoral Fellow at Emory Vaccine Center, Emory University, Atlanta with Prof. Mary Galinski in collaboration with Dr. John Barnwell for a period of one year from Feb 2014-Jan 2015. I had been carrying out mRNA FISH studies on Schizont Infected Cell Agglutination variant antigen (SICAvars) of Plasmodium parasite. Our group has been involved in elucidating host pathogen interaction of malaria parasite by following omics approaches.

I had completed my PhD on the topic "Role of adhesion molecules in immunity enhancement against Visceral leishmaniasis infection" with a special focus on CD2 adhesion molecule from University of Allahabad and Rajendra Memorial Research Institute of Medical Sciences, Patna a pioneer Institute working in the area of Visceral Leishmaniasis infection. During my masters project, I had an experience of working in the area of neuroscience as well where I have worked on the " Modulation of Na/K ATPase activity of rat brain synaptosome by Norepinephrine and Serotonin".

I have published around 15 papers in peer reviewed journals,

25 Papers presented in international/ national conferences, 2 books and a book chapter. Besides I have been awarded in Essay writing competitions organized by UNICEF, Competition success review magazine, School and University. I am an efficient scientific communicator as well.

National Post Doctoral Fellow (NPDF-SERB)

Which institute and country do you work in?

Indian Institute of Technology Ropar, Rupnagar, Punjab, India

What is your home country?

India

What are your research interests?

Immunology of Infectious Diseases, Vaccine development, Biotherapeutics

Tell us about yourself and your research interests:

In my most recent position, I am employed as a Post-doctoral fellow at IIT-Ropar (May 2018- present). I am immensely interested in vaccine development towards infectious diseases. Vaccines are the best prophylactic measure, which has

eliminated many diseases like polio, measles and small pox. During my PhD, adjuvant effects of IL22 were studied alongwith antigen GroEL as potential vaccine candidate molecules against Salmonella and other microbial infections. My work shows the potential of co- administration of IL22 and GroEL/ fusion construct as recombinant proteins/DNA vaccine constructs in enhancing the immune responses and protective efficacy, circumventing the need of any adjuvant in vaccine development for infectious diseases. In my postdoctoral work, I am working towards development of an improved BCG vaccine i.e., a recombinant BCG vaccine expressing memory enhancing cytokines. Failure to induce a long-lasting protective immunity is the main shortcoming of most of current vaccines. In addition to cognate immune interactions, other distinct signals are required during the induction of sustenance of immune response for instance, signaling through multiple Toll-like receptors (TLRs) and cytokines to shape and skew immune response toward a stable and desired one. Nevertheless, there are tremendous differences in natural infection and vaccine induced immune response. Consequently, it is important to study microbial and immune signals of utmost importance during course of infection and vaccination that are required for development of long-lasting immunological memory and influences the outcome of disease. This may lead to a better understanding for the development of effective vaccines against dreadful diseases, mainly intracellular pathogens.

Reviewer

Which institute and country do you work in?

Previous Affiliation: Indian Institute of Science (IISc), Bengaluru, India

What is your home country?

India

What are your research interests?

Osteoimmunology, Transplantation Immunology

Tell us about yourself and your research interests:

My primary research area of interest is Immunology. Both my doctoral and post doctoral experiences have helped me widen my understanding of the immune system. As a researcher, I strongly believe in taking research from bench-to-bedside. My post doctoral work from IISc, Bengaluru involved the investigation of role of Glycodelin, a natural immunosuppressor, in averting graft versus host reaction. We developed an allograft nude mouse model for this study and the Cytotoxic T Lymphocytes (CTLs) mediated killing of donor graft was clearly evident in this model. The transplanted graft survived successfully as glycodelin was able to downregulate the factors which regulate the cytotoxicity of CTLs and thus helped in the management of graft rejection.

My doctoral work from D. G. Ruparel College and ACTREC, Mumbai highlighted the potential of marine mollusc as an anti-osteoporotic agent and also identified its role in regulating lymphocyte-bone interaction. The extract was also able to control the increased T cell expression and secretion of pro-inflammatory cytokines followed by ovariectomy. This work was awarded with Young Scientist Award at the 9th International Marine Biotechnology Conference, China and also bagged best poster award at Immunocon, NIMHANS, Bengaluru.

As a lecturer, I have conducted lectures and practicals in immunology for undergraduates and postgraduates. As a researcher, I would like to be actively involved in studying and unravelling the intricacies of the immune system and make myself adept in Immunology.

What is your name?

Rushikesh Sudam Patil

What is your current position?

Post-Doctoral Fellow “INSPIRE Faculty” supported by Department of Science and Technology, Govt of India

Which institute and country do you work in?

Department of Immunology, Advanced Centre for Treatment Research and Education in Cancer (ACTREC)- Tata Memorial Centre, Kharghar, Navi Mumbai, India

What is your home country?

India

What are your research interests?

Gamma delta T cells, T cell metabolism and Cancer

Tell us about yourself and your research interests:

I completed my PhD in 2016 under the mentorship of Prof S.V. Chiplunkar from ACTREC-Tata Memorial Centre, Navi Mumbai. The research work focused on understanding the immune dysfunctions in pathogenesis of gallbladder cancer patients in India. Highlight of the study was to show that the IL17 secreting $\gamma\delta$ -T lymphocytes (T $\gamma\delta$ 17) induce angiogenesis and are associated with poor survival of Gallbladder cancer patients. This work received “Dr. G P Talwar young scientist award” from Indian

Immunology Society. I then commenced a post-doctoral fellowship to investigate the role of exhaustion of T lymphocytes infiltrating the tumor environment of colon cancer patients, a project headed by Dr. S.V. Chiplunkar, in collaboration with 'Bristol Meyer Squibb', Bangalore. Recently I received an "INSPIRE Faculty award" to work at ACTREC-Tata Memorial Centre, Navi Mumbai. This is a competitive research grant given by Department of Science and Technology, Govt. of India to young investigators to pursue independent research. This grant was awarded for a project 'Understanding the metabolic pathways regulating the functions of $\gamma\delta$ -T cells in cancer' which was selected after a stringent review process.

I am keen to investigate the metabolic regulation of T cells in inflammatory environment. 'How antigenic stimulation rewires the metabolic need of gamma delta T cells and vice versa in tumor environment' and 'does the alterations in the metabolic preferences contribute to T cell exhaustion in tumor environment' are the questions I am presently perusing. I am actively involved in teaching basic immunology to undergraduate students and I participate in the Immunology hands-on training workshops organised by 'Mumbai Immunology Group'.
