

ARV Drug Resistance

- [Reverse Transcriptase \(RT\) Mutations](#)
- [Protease \(PR\) Mutations](#)
- [Envelope gp41 Mutation](#)

Reverse Transcriptase (RT) Mutations

Download a pdf that describes how drug resistance mutations are introduced into the HIV reverse transcriptase enzyme. The graphic depicts the general principle of RT mutations that would confer resistance to both [NRTI](#) and [NNRTI](#) classes of antiretroviral drugs.

Download RT Mutation Guide

[Download](#)

Protease (PR) Mutations

Download a pdf that describes how drug resistance mutations are introduced into the HIV protease enzyme. The graphic depicts the general principle of PR mutations that would confer resistance to the protease inhibitor class of antiretroviral drugs.

Download PR Mutation Guide

Envelope gp41 Mutation

Download a pdf that describes how drug resistance mutations are introduced into the HIV envelope gp41 fusion protein. Mutations in gp41 will confer resistance to the entry inhibitor enfuvirtide (T-20 or fuzeon) antiretroviral drugs.
